This limitation of liability shall apply to any claim or cause whatsoever whether such claim or cause arises in contract, tort or otherwise.

About the Author

David A. Fanella, Ph.D., S.E., P.E., F.ASCE, F.SEI, F.ACI, is the Senior Director of Engineering at the Concrete Reinforcing Steel Institute. He has 30 years of experience in the design of a wide variety of buildings and other structures. Dr. Fanella has authored many technical publications, including the second edition of a textbook on reinforced concrete design for McGraw-Hill. He is a Member of a number of ACI Committees and is a Fellow of ASCE, SEI, and ACI. He will serve as a Member of an ASCE/SEI 7 Committee, Minimum Design Loads and Associated Criteria for Buildings and Other Structures, for the 2022 edition. Dr. Fanella is a licensed Structural Engineer and a licensed Professional Engineer in Illinois and is a past board member and a past president of the Structural Engineers Association of Illinois.

About the International Code Council

The International Code Council® (ICC®) is a member-focused association dedicated to helping the building safety community and construction industry provide safe, sustainable, and affordable construction through the development of codes and standards used in the design, build, and compliance process. Most U.S. communities and many global markets choose the International Codes®. ICC Evaluation Service (ICC-ES), a subsidiary of the International Code Council, has been the industry leader in performing technical evaluations for code compliance fostering safe and sustainable design and construction.

About the National Council of Structural Engineers Associations

The National Council of Structural Engineers Associations (NCSEA) was founded in 1993 as an autonomous federation of state Structural Engineers Associations (SEAs) from throughout the United States. NCSEA advances the practice of structural engineering by representing and strengthening these 44 state-based SEA Member Organizations. In addition, NCSEA provides industry-leading education through its webinars, Annual Summit, publications, and magazine. Based in Chicago, NCSEA's governing body is its Board of Directors.

About S. K. Ghosh Associates

S. K. Ghosh Associates LLC is a member of the ICC Family of Companies. The company provides seismic and code-related consulting services to engineers, businesses, trade associations, code-writing bodies, and governmental agencies involved in the design and construction of buildings and other structures that are impacted by the provisions of building codes. Technical support is provided through publications, seminars, peer reviews, research projects, computer programs, code interpretations and comparisons, a website, and other means.

334 East Colfax Street, Unit E, Palatine, IL 60067

About the Structural Engineering Institute

The Structural Engineering Institute (SEI) was created on October 1, 1996. SEI is a full-service, discipline-oriented, and semi-autonomous institute within the American Society of Civil Engineers (ASCE). SEI involves all facets of the structural engineering community including practicing engineers, research scientists, academicians, technologists, material suppliers, contractors, and owners. By facilitating coalitions or as an independent activity, SEI is committed to advancing the structural engineering profession and rapidly responding to the emerging needs of the broad structural engineering community.

Contents

Preface	vii
Chapter 1: Introduction	1
1.1 Overview	1
1.2 Scope	2
1.3 References	4
Chapter 2: Load Combinations	5
2.1 Introduction	5
2.2 Load Effects	5
2.3 Load Combinations Using Strength Design or Load and Resistance Factor Design	6
2.4 Load Combinations Using Allowable Stress Design	10
2.5 Load Combinations with Overstrength	14
2.6 General Structural Integrity	16
2.7 Extraordinary Loads and Events	18
2.8 Examples	18
2.9 References	28
2.10 Problems	29
Chapter 3: Dead, Live, Rain and Soil Lateral Loads	31
3.1 Dead Loads	31
3.2 Live Loads	31
3.3 Rain Loads	46
3.4 Soil Lateral Loads	51
3.5 Flowcharts	52
3.6 Examples	56
3.7 References	73
3.8 Problems	73
Chapter 4: Snow and Ice Loads	75
4.1 Introduction	75
4.2 Snow Loads	75
4.3 Ice Loads	100
4.4 Flowcharts	105
4.5 Examples	115
4.6 References	140
4.7 Problems	141
Chapter 5: Wind Loads	145
5.1 Introduction	145
5.2 General Requirements	153
5.3 Main Wind Force Resisting Systems	166
5.4 Components and Cladding	190
5.5 Wind Tunnel Procedure	201
5.6 Flowcharts	203

5.7	Examples	235
5.8	References	322
5.9	Problems	323
Chapter 6: Earthquake Loads		327
6.1	Introduction	327
6.2	Seismic Design Criteria	332
6.3	Seismic Design Requirements for Building Structures	343
6.4	Seismic Design Requirements for Nonstructural Components	385
6.5	Seismic Design Requirements for Nonbuilding Structures	389
6.6	Flowcharts	391
6.7	Examples	425
6.8	References	469
6.9	Problems	470
Chapter 7: Flood and Tsunami Loads		473
7.1	Introduction	473
7.2	Flood Loads	474
7.3	Tsunami Loads and Effects	490
7.4	Examples	514
7.5	References	534
7.6	Problems	534
Chapter 8: Load Paths		537
8.1	Introduction	537
8.2	Load Paths for Gravity Loads	538
8.3	Load Paths for Lateral Loads	541
8.4	References	559
Index		561

Preface

This edition updates this publication to the 2018 *International Building Code*[®] (IBC[®]) and the 2016 edition of *Minimum Design Loads and Associated Criteria for Buildings and Other Structures* (ASCE/SEI 7-16).

Like previous editions, this edition is an essential resource for civil and structural engineers, architects, plan check engineers and students who need an efficient and practical approach to load determination under the 2018 IBC and ASCE/SEI 7-16 standard. It illustrates the application of code provisions and methodology for determining structural loads through the use of numerous flowcharts and practical design examples. Included are the following major topics:

- Load combinations for allowable stress design, load and resistance factor (strength) design, seismic load combinations with vertical load effect and special seismic load combinations, and
- Dead loads, live loads (including live load reduction), rain loads, snow loads, ice loads, wind loads, earthquake load effects and flood loads and tsunami loads.

Problem sections are included at the ends of most of the chapters. Solutions to these problems, which are available in a companion document to this publication, further illustrate the proper application of the code provisions.

Major changes occurred in the wind load provisions in going from the 2010 to the 2016 edition of ASCE/SEI 7. These changes are covered in detail in Chapter 5. A new chapter on tsunami loads and effects is included in ASCE/SEI 7-16, and these requirements are covered in Chapter 7.

Structural Load Determination: 2018 IBC[®] and ASCE/SEI 7-16 is a multipurpose resource for civil and structural engineers, architects and plan check engineers because it can be used as a self-learning guide as well as a reference manual.

Acknowledgments

The author is deeply grateful to S. K. Ghosh Associates LLC for their thorough review of this publication. Thanks are also due to the Wind Engineering Subcommittee of the NCSEA Code Advisory Committee for reviewing Chapter 5 on wind loads.
