Appendix A6.1 – Voluntary Standards for Health Facilities ............... 231
Preface

This is the 4th edition of the Guide to the California Green Building Standards Code Nonresidential prepared by the California Building Standards Commission (CBSC).

This edition reflects regulatory changes that were made to the California Green Building Standards Code, Part 11, Title 24, during the 2016 Intervening and 2018 Triennial Code Adoption Cycles. The guide is intended to highlight and clarify both mandatory and voluntary nonresidential standards in the 2019 California Green Building Standards Code (CALGreen) for use by local building departments, builders and designers. The effective date of the CALGreen Code is January 1, 2020.

Comments and suggestions regarding the 2019 CALGreen Guide Nonresidential are welcomed in order to make future editions more beneficial to code users. Written comments may be submitted via email to cbsc@dgs.ca.gov, or regular mail addressed to:

Mia Marvelli, Executive Director
California Building Standards Commission
2525 Natomas Park Drive, Suite 130
Sacramento, CA 95833-2936
About the California Building Standards Commission (CBSC)

Established in 1953 by California Building Standards Law, CBSC is a commission within the Department of General Services. Members of the commission are appointed by the governor and confirmed by the state senate, and serve four-year terms.

CBSC’s mission is to produce sensible and usable state building standards and administrative regulations that implement or enforce those standards. Specifically, CBSC administers the adoption, approval and implementation processes for the California Building Standards Code as follows:

- Manages the regulatory triennial and intervening code adoption cycles, and respective Title 24 publications;
- Coordinates and collaborates with all code-proposing and code-adopting state agencies regarding the code cycles and model code revisions to ensure uniformity throughout California’s building standards;
- Promotes transparency and public participation throughout the code development processes;
- Administers a public appeal process;
- Educates the public and stakeholders about the nonresidential green building code to ensure understanding and compliance; and
- Develops building standards for state buildings and universities, and nonresidential green building standards where no other state agency has authority, and any other occupancies as directed by the legislature and/or executive order.

About the International Code Council® (ICC)

The International Code Council is a member-focused association. It is dedicated to developing model codes and standards used in the design, build and compliance process to construct safe, sustainable, affordable and resilient structures. Most U.S. communities and many global markets choose the International Codes. ICC Evaluation Service (ICC-ES) is the industry leader in performing technical evaluations for code compliance fostering safe and sustainable design and construction.

Governmental Affairs Office: 500 New Jersey Avenue, NW, 6th Floor, Washington, DC 20001

Regional Offices: Eastern Regional Office (BIR), Central Regional Office (CH), Western Regional Office (LA)

To purchase all or part of the 2019 edition of Title 24 or the 2019 Guide to the Green Building Standards Code (nonresidential or residential) contact ICC at 888-ICC-SAFE (888-422-7233) or www.iccsafe.org.
Title 24, California Code of Regulations

The 2019 California Building Standards Code, Title 24, California Code of Regulations consists of the following thirteen parts. CALGreen is Part 11 of Title 24.

Part 1  California Administrative Code
Part 2  California Building Code Volume 1 and Volume 2 are based on the 2018 International Building Code
Part 2.5 California Residential Code is based on the 2018 International Residential Code
Part 3  California Electrical Code is based on the 2017 National Electrical Code
Part 4  California Mechanical Code is based on the 2018 Uniform Mechanical Code
Part 5  California Plumbing Code is based on the 2018 Uniform Plumbing Code
Part 6  California Energy Code
Part 7  Vacant
Part 8  California Historical Building Code
Part 9  California Fire Code is based on the 2018 International Fire Code
Part 10 California Existing Building Code is based on the 2018 International Existing Building Code
Part 11 California Green Building Standards Code (CALGreen)
Part 12 California Referenced Standards Code

CBSC Education and Outreach

CBSC offers CALGreen nonresidential training along with a variety of resources and educational publications available on its website: www.dgs.ca.gov/BSC/Resources. For information on CALGreen training, contact the commission via email at cbstraining@dgs.ca.gov, or complete the Education and Outreach contact form located on the website at www.dgs.ca.gov/BSC/Education-and-Outreach. The following industry organizations may also offer CALGreen educational programs:

• International Code Council—(www.iccsafe.org)
• Green Technology—(www.green-technology.org)
• California Building Officials—(www.calbo.org)
• American Institute of Architects—California Council (aiacalifornia.org)
History of CALGreen

CALGreen is the first-in-the-nation mandatory green building standards code. In 2007, the California Building Standards Commission was directed to develop green building standards in an effort to meet the goals of California’s landmark initiative Assembly Bill 32 (AB 32, Chapter 488, Statutes of 2006), which added Division 25.5 to the California Health and Safety Code. Known as the California Global Warming Solutions Act, AB 32 established a comprehensive program of cost-effective reductions of greenhouse gases (GHG) to 1990 levels by 2020, including mandatory emissions reporting and an ongoing market-based compliance program. Other green building legislation proposed in the 2007–2008 legislative session (AB 35 concerning state-owned buildings, AB 888 concerning commercial B-occupancy buildings, and AB 1035 concerning residential construction) was vetoed by the governor. In his veto messages, the governor expressed his support for development of green building standards, but that they should not be statutory, conflict with current safety standards or rely on private entities to set the standards.

In response to the above actions, CBSC worked closely with the Department of Housing and Community Development, the Division of the State Architect and the Office of Statewide Health Planning and Development to establish the green building standards, with the goals of (1) reducing greenhouse gas emissions (GHG) from buildings; (2) promoting environmentally responsible, cost-effective, healthier places to live and work; (3) reducing energy and water consumption; and (4) responding to the environmental directives of the administration. State agency representatives, industry stakeholders and interested parties were enthusiastic contributors to the initial code development process and remain active participants in the evolution of CALGreen measures today.

The first edition of CALGreen contained only voluntary measures and was published in 2008 with an effective date of August 2009. It established Administration, Definitions and Green Building chapters and created the code categories of planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, environmental air quality, referenced standards, installer and inspector qualifications, and appendices for residential, nonresidential and referenced standards. Mandatory measures were then adopted in the 2010 CALGreen edition, which went into effect in January 2011.

The California Air Resources Board announced in a press release on July 11, 2018 that “greenhouse gas pollution in California fell below 1990 levels for the first time since emissions peaked in 2004 – an achievement roughly equal to taking 12 million cars off the road or saving 6 billion gallons of gasoline a year.” The establishment of CALGreen has been an important step toward more efficient and responsible building design, which has helped California meet the GHG reduction goal ahead of schedule.

Timeline

The 2010 CALGreen Code established chapters for residential and nonresidential mandatory measures. A 20 percent reduction of indoor water use and a 50 percent construction waste reduction were required along with waste management plan requirements. Building commissioning for new buildings 10,000 square feet and over was also introduced along with requirements for temporary construction ventilation and finish materials.

The 2013 CALGreen Code clarified and expanded a number of requirements that included upgrade triggers for nonresidential additions and alterations. New sections were added in the areas of water efficiency and conservation, which included a 20 percent reduction of indoor water use. References to the California Energy and Plumbing Codes were also included. Demolition and recycling requirements were further defined.
The 2016 CALGreen Code addressed clean air vehicles and increased requirements for electric vehicle charging infrastructure. A new universal waste code section was incorporated for additions and alterations. Organic waste was defined and included an exception for rural jurisdictions. Clarification was added for commissioning 'I' and 'L' occupancies not currently regulated by the Office of Statewide Health Planning and Development or California Energy Commission. Water efficiency and conservation included a new section for food waste disposers, and outdoor water use remained subject to the Model Water Efficient Landscape Ordinance (MWELO) emergency standards of 2015. Pursuant to Executive Order No. B-29-15, addressing California’s ongoing emergency drought conditions, state agencies proposed water-related emergency standards that were immediately enforceable in June 2015 and later adopted as amendments to the 2013 CALGreen Code. Those amendments were carried over into the 2016 CALGreen Code.

CALGreen 2019 clarifies and updates many previously implemented regulations, including: Storm Water Pollution Prevention Plan; backlight, uplight and glare reference standards; showerhead flow rates; resilient flooring systems; Minimum Efficiency Reporting Value (MERV) ratings for air filters; and commissioning reference standards. Details regarding these updates and changes can be found in Chapter 5 and Appendix A5.

Effective Use of This Guide

This guide is intended to assist code users and local enforcement authorities with nonresidential applications of the 2019 edition of CALGreen. This guide corresponds with the chapters in CALGreen, with an emphasis on the nonresidential mandatory requirements located in Chapter 5 and the nonresidential voluntary measures located in Appendix A5. The intent of each code section, along with compliance and enforcement recommendations, is explained. The guide is formatted as follows:

- **Code section**: Code sections reprinted from the 2019 CALGreen Code are shown in green text.
- **Intent**: Many of the code sections are followed by language explaining the intent of the requirement. In some instances, an explanation of other laws or regulations that served as a catalyst for the regulation is included.
- **Change for 2019**: Identifies new code language or amendments made during the development of the 2019 CALGreen Code.
- **Compliance method**: The recommended compliance method is identified, which may include design team information, suggestions or examples.
- **Enforcement**:
  - **Plan intake**: Recommendations for the plan reviewer concerning the construction documents; and
  - **On-site enforcement**: Recommendations for the local inspector during construction inspection.

Sections in CALGreen marked “Reserved” are not shown in this guide.
New in 2019

Sections 5.106.1 and 5.106.1.2 contain clarifications regarding project size in compliance with the Storm Water Pollution Prevention Plan and best management practices. New Section 5.106.2 references the State Water Resources Control Board's requirements.

Several changes were made to CALGreen to align with the California Energy Code (CEC), which is Part 6 of Title 24. In Section 5.106.8, Note 3 was added to reference Part 6 for additions and alterations requirements. Section 5.504.5.3 contains updated MERV ratings for air filters to align with the CEC. Finally, some voluntary measures were removed from CALGreen to avoid conflict with the CEC. They are A5.504.5.3.1 Filters, Tier 1 and A5.504.5.3.1, Filters, Tier 2.

Section 5.410.2 has been updated to clarify that it applies to non-energy related systems only. Forms and templates to assist with Commissioning Referenced Standards for Non-Energy Systems can be found in Chapter 8 of this guide.

Details regarding these updates, and all others made for the 2019 edition of CALGreen, can be found in Chapter 5 and Appendix A5 of this guide.
