*Note: The table entries are placeholders for the actual content.*
CONTENTS

- 904.13 Domestic Cooking in Institutional Occupancies 52
- 904.14, Table 901.6.1 Aerosol Fire-extinguishing Systems 54
- 905.3.1 Class III Standpipes 56
- 905.4 Class I Standpipe Hose Connections 59
- 905.11 Locking Caps on Standpipe Outlets 61
- 906.1 Portable Fire Extinguishers 62
- 907.1.2 Fire Alarm Construction Documents 63
- 907.2.1 Fire Alarms in Group A Occupancies 64
- 907.2.10 (Deleted) Group R-4 Fire Alarm System 66
- 907.5.2.2.4 Emergency Voice/Alarm Communication System Captions 68
- 910.5 Maintenance of Smoke and Heat Removal Equipment 69
- 916 Gas Detection Systems 71
- 1004.5, 1004.8 Occupant Load Calculation in Business Use Areas 74
- 1006.2.1 Spaces with One Exit or Exit Access Doorway 76
- 1006.2.2.6, 1006.2.1, 1017.2 Groups R-3 and R-4 Protected with NFPA 13D Sprinkler System 79
- 1006.3, 1006.3.1 Exits on Adjacent Stories 82
- 1008.2.3 Illumination of the Exit Discharge 84
- 1008.3.5, 1008.2.2 Emergency Illumination in Group I-2 86
- 1009.7.2 Protection of Exterior Areas of Assisted Rescue 88
- 1010.1.1 Size of Doors 90
- 1010.1.4.4 Locking Arrangements in Educational Occupancies 93
- 1010.1.9.8 Delayed Egress 95
- 1010.1.9.9, 1010.1.9.10 Electrically Locked Egress Doors 98
- 1010.1.9.12 Locks on Stairway Doors 101
- 1010.1.10 Panic Hardware and Fire Exit Hardware 103
- 1010.3 Turnstiles 105
- 1011.6 Stairway Landings 108
- 1013.2 Floor-level Exit Signs in Group R-1 110
- 1015.6, 1015.7 Fall Arrest for Rooftop Equipment 111
- 1017.3 Common Path of Egress Travel 113
- 1023.3.1 Stairway Extension 115
- 1023.5, 1024.6 Exit Stairway and Exit Passageway Penetrations 117
- 1025.1 Luminous Egress Path Marking in Group I Occupancies 119
- 1026.4, 1026.4.1 Refuge Areas for Horizontal Exits 120
- 1029.6, 1029.6.3, 1029.7 Open-air Assembly Seating 122
- 1029.9.1 Minimum Aisle Width 125
- 1030.1 Emergency Escape and Rescue Openings 127
- 1030.1.1 Operation of Emergency Escape and Rescue Openings 129
1031.2.2 Locking Arrangements in Existing Educational Occupancies 131
1031.4 Exit Signs in Existing Buildings 133
1031.10 Inspection and Testing of Emergency Egress Lighting 134
1103.5.1 Fire Sprinklers in Existing Group A-2 Occupancies 135
1103.9 Carbon Monoxide Alarms in Existing Buildings 138
1104.16.2 Wall Openings Adjacent to Fire Escapes 139
1105.6.2 Fire-protection-rated Doors in Existing Group I-2 140
Chapter 12 Energy Systems 141
1204.5 Rapid Shutdown for Solar Photovoltaic Power Systems 144
1206.2 Stationary Storage Battery Systems 147

PART 4 Special Occupancies (Chapters 20–39) 153
Chapter 22 Combustible Dust 155
2303.2.1 Height of Emergency Disconnect Switch 157
2306.7.3.1 Protection from Vehicle Impact 158
2309.6, 2309.6.1 Defueling of Hydrogen Fueled Vehicles 159
2311.6 Repair of Vehicles Fueled by CNG and LNG 162
2311.8 Repair of Vehicles Fueled by Lighter-than-air Fuels 164
2403.2.1.3 Classified Electrical Areas Around Spray Booths 170
2404.2, 2404.3.1, 914.9 Spray Rooms and Spray Booths 171
2810 Outdoor Storage of Pallets at Pallet Manufacturing and Recycling Facilities 174
Chapter 31 Umbrella Structures 177
3103.3.1 Tents and Membrane Structures Used as Special Amusement Buildings 178
3103.6, 3103.9 Structural Stability of Tents 180
3104.2 Fabrics for Tents and Membrane Structures 182
3105, 105.6.47, 105.7.22 Temporary Special Event Structures 184
3106 Outdoor Assembly Events 187
3107.13 LP-gas Containers and Tanks Adjacent to Tents and Membrane Structures 191
Chapter 32 High-piled Combustible Storage 193
3304.5, 3308, 3309.1 Fire Watch During Construction and Demolition 198
Chapter 38 Higher Education Laboratories 201
Chapter 39 Processing and Extraction Facilities 205

PART 5 Hazardous Materials (Chapters 50–67) 207
Table 5003.1.1(1) Consumer Fireworks 209
5003.1.1(1), 5003.11.1, 6303.1.1.2 Maximum Allowable Quantity for Class 3 Oxidizers 212
5003.8.3.4 Construction of Control Areas 214
CONTENTS

5005.1.12
Protection of Hazardous Materials Piping Systems 216

5103.2, 5104.1.2
Aerosol Products in Plastic Containers 218

5103.2.2, 5104.2.2, 5104.3.3, 5104.8, 5106.2.2
Aerosol Cooking Spray Products 220

5306.1, 5306.2
Medical Gas Storage 222

5307.1, 5307.3
Liquid Carbon Dioxide Systems for Beverage Dispensing 225

5307.4
Carbon Dioxide Enrichment Systems 228

5707
Mobile Fueling Operations 231

6104.3
Location of LP-gas Containers 234

PART 6
Appendices (A–N) 237

E102.1.7.1
Hazard Classification of Oxidizers 238

Appendix N
Indoor Trade Shows and Exhibitions 240
The purpose of *Significant Changes to the International Fire Code®, 2018 Edition*, is to familiarize fire officials, building officials, plans examiners, fire inspectors, design professionals and others with many of the important changes in the 2018 *International Fire Code®* (IFC®). This publication is designed to assist code users in identifying the specific code changes that have occurred and, more important, in understanding the reasons behind the changes. It is also a valuable resource for jurisdictions in order to help them explain the significance and impact of the changes as they go through their code adoption process.

Only a portion of the total number of code changes to the IFC are discussed in this book. The changes selected were identified for a number of reasons, including their frequency of application, special significance or change in application. However, the importance of the changes not included is not to be diminished. Further information on all code changes can be found in the Complete Revision History, available from the International Code Council® (ICC®) in 2018, through the online store at http://shop.iccsafe.org. This resource collection provides the published documentation for each successful code change contained in the 2018 IFC since the 2015 edition.

*Significant Changes to the International Fire Code®, 2018 Edition*, is arranged to follow the general layout of the IFC, including code sections and section number format. The table of contents, in addition to providing guidance in the use of this publication, allows for a quick identification of those significant code changes that occur in the 2018 IFC.

Throughout the book, each change is accompanied by a photograph or an illustration to assist in and enhance the reader’s understanding of the specific change. A summary and a discussion of the significance of the change are also provided. Each code change is identified by type, be it an addition, modification, clarification or deletion.

The code change itself is presented in a legislative format similar to the style utilized for code change proposals. Deleted code language is shown with a strikethrough, and new code text is indicated by underlining. As a result, the actual 2018 code language is provided as well as
a comparison with the 2015 language, so the user can easily determine changes to the specific code text.

As with any code change text, *Significant Changes to the International Fire Code, 2018 Edition*, is best used as a companion to the 2018 IFC. Because only a limited discussion of each change is provided, the reader should reference the code itself in order to gain a more comprehensive understanding of the code change and its application.

The commentary and opinions set forth in this text are those of the authors and do not necessarily represent the official position of ICC. In addition, they may not represent the views of any enforcing agency because such agencies have the sole authority to render interpretations of the IFC. In many cases, the explanatory material is derived from the reasoning expressed by code change proponents.

Comments concerning this publication are encouraged and may be directed to ICC at significantchanges@iccsafe.org.

### About the *International Fire Code*

Fire code officials, fire inspectors, building officials, design professionals, contractors and others involved in the field of fire safety recognize the need for a modern, up-to-date fire code. The *International Fire Code* (IFC), 2018 Edition, is intended to meet these needs through model code regulations that safeguard the public health and safety in all communities, large and small. The IFC is kept up to date through ICC’s open code development process. The provisions of the 2015 edition, along with those code changes approved through 2016, make up the 2018 edition.

One in a family of International Codes® published by ICC, the IFC is a model code that establishes minimum fire safety requirements for new and existing buildings, facilities, storage and processes. It addresses fire prevention, fire protection, life safety and safe storage and use of hazardous materials. The IFC provides a total approach of controlling hazards in all buildings and sites, regardless of the hazard being indoors or outdoors.

The IFC is a design document. For example, before a building is constructed, the site must be provided with an adequate water supply for firefighting operations and a means of building access for emergency responders in the event of a medical emergency, fire or natural or technological disaster. Depending on the building’s occupancy and uses, the IFC regulates the various hazards that may be housed within the building, including refrigeration systems, application of flammable finishes, fueling of motor vehicles, high-piled combustible storage and the storage and use of hazardous materials. The IFC sets forth minimum requirements for these and other hazards and contains requirements for maintaining the life safety of building occupants, the protection of emergency responders, and to limit the damage to a building and its contents as the result of a fire, explosion or unauthorized hazardous material discharge and electrical systems. The IFC is available for adoption and use by jurisdictions internationally. Its use within a governmental jurisdiction is intended to be accomplished through adoption by reference, in accordance with proceedings establishing the jurisdiction’s laws.
Acknowledgements

**Significant Changes to the International Fire Code, 2018 Edition**, is the result of a collaborative effort, and the author is grateful for the assistance and contributions by the following talented staff of ICC Business and Product Development: Hamid Naderi, P.E., C.B.O., Senior Vice President; Doug Thornburg, A.I.A., C.B.O., Vice President, Director of Education and Certification; and Jay Woodward, A.I.A, Senior Staff Architect. The author would also like to thank Bob Davidson, Davidson Code Concepts, LLC; Howard Hopper, Regulatory Services Program Coordinator with Underwriters Laboratories LLC; and Pat McLaughlin, McLaughlin & Associates for their insight and assistance with application of some of the technical requirements.

A special thank you is extended to Robert Neale, Vice President, ICC Government Relations. Rob spent many hours working on the content, sharing his knowledge, and providing peer review.

About the Author

Kevin H. Scott
President
KH Scott & Associates LLC

Kevin Scott is President of KH Scott & Associates LLC. Kevin has extensive experience in the development of fire safety, building safety and hazardous materials regulations. Kevin has actively worked for over 25 years in the development of fire code, building code and fire safety regulations at the local, state, national and international levels. Kevin previously worked as a Senior Regional Manager with the International Code Council, and before that, he was Deputy Chief for the Kern County Fire Department, California, where he worked for 30 years. He has developed and presented many seminars on a variety of technical subjects including means of egress, high-piled combustible storage, hazardous materials, and plan review and inspection practices.

Kevin was a member of the original IFC Drafting Committee that worked to create the first edition of the IFC. He served for seven years on the IFC Code Development Committee and was chairperson for the committee from 2001 to 2004. Kevin has actively participated in numerous technical committees to evaluate specific hazards and technologies, and to create regulations specific to those hazards.

Some of the more significant committees are:
- High-piled Combustible Storage Committee
- Hydrogen Gas Ad Hoc Committee
- Task Group 400
- Technical Advisory Committee on Retail Storage of Group ‘A’ Plastic Commodities
- Underwriters Laboratories Fire Council.

Kevin’s constant work to improve fire and life safety has been recognized on many levels. His contributions have been acknowledged by various organizations when they presented him with the following awards:
• Mary Eriksen-Rattan Award in 2013—presented by the Southern California State Fire Prevention Officers’ Association
• William Goss Award in 2009—presented by the California State Firefighters Association
• Fire Official of the Year Award in 2005—presented by the California Building Officials
• Robert W. Gain Award in 2003—presented by the International Fire Code Institute.

About the Contributor

Robert A. Neale
Vice President
Government Relations: National Fire Service Activities

Rob currently serves as the International Code Council Vice President for Government Relations: National Fire Service Activities. He is responsible for strategic guidance to help local fire organizations adopt and enforce the most recent version of the model codes and build relationships among code enforcement entities.

In 2015, Rob retired as Deputy Superintendent for the United States Fire Administration National Fire Academy in Emmitsburg, Maryland. He led the development of curriculum aimed at improving the professionalism of America’s fire service.

In 2012, he received the FEMA Administrator’s Award for Innovation in training for his development of the popular Coffee Break Training series. Rob was awarded the International Society for Performance Improvement award for the National Fire Academy class “Evaluating Performance-Based Designs” in 2004.

He has more than 30 years of experience in Washington state municipal fire protection as a fire chief, fire marshal and fire fighter.

Rob has a master’s degree from the Center for Homeland Defense and Security at the Naval Postgraduate School and a bachelor’s degree in Liberal Studies from Western Washington University.

Rob has been published regularly in national fire protection trade journals, and for many years has been content developer and platform instructor on codes, standards and fire protection systems.
About the International Code Council

The International Code Council is a member-focused association. It is dedicated to developing model codes and standards used in the design, build and compliance process to construct safe, sustainable, affordable and resilient structures. Most U.S. communities and many global markets choose the International Codes. ICC Evaluation Service® (ICC-ES®) is the industry leader in performing technical evaluations for code compliance fostering safe and sustainable design and construction.
