Seismic and Wind Forces: Structural Design Examples
5th Edition

ISBN: 978-1-60983-844-7

Publications Manager:	Mary Lou Luif
Project Editor:	Kathy Osmus
Typesetting:	Dedicated Book Services
Cover Design:	Duane Acoba

About the Author ix

Introduction xi

1 SEISMIC DESIGN 1

1.1 Seismic loads 4
1.2 Design procedures 7
1.3 Site classification characteristics 8
1.4 Earthquake response spectra 9
1.4.1 General procedure 11
1.4.2 Site-specific procedure 11
1.5 Site coefficient 13
1.6 Adjusted maximum considered earthquake spectral response accelerations 15
1.7 Fundamental period of vibration of the structure 16
1.7.1 General approximate method 17
1.7.2 Approximate method for moment-resisting frames 18
1.7.3 Rational analysis method 19
1.8 Design spectral response acceleration parameters 21
1.9 Risk categories and importance factors 26
1.10 Seismic design category 27
1.10.1 Seismic design category A 28
1.10.2 Seismic design category B 30
1.10.3 Seismic design category C 30
1.10.4 Seismic design category D 31
1.10.5 Seismic design category E 31
1.10.6 Seismic design category F 31
1.11 Lateral-force-resisting systems 33
1.11.1 Bearing wall systems 34
1.11.2 Building frame system 36
1.11.3 Moment-resisting frames 38
1.11.4 Dual systems with special moment frames 38
1.11.5 Dual systems with intermediate moment frames 39
1.11.6 Shear wall-frame interactive system with ordinary reinforced concrete moment frames and ordinary reinforced concrete shear walls 40
1.11.7 Cantilever column systems 40
1.11.8 Steel systems not specifically detailed for seismic resistance, excluding cantilever column systems 41
1.11.9 Wind effects 42
1.12 Response modification coefficient 42
1.12.1 Seismic-force-resisting system 42
1.12.2 Combinations of seismic-force-resisting systems 45
1.13 Overstrength factor 49
1.14 Deflection amplification factor 50
1.15 Effective seismic weight 50
1.16 Seismic response coefficient 52
1.17 Seismic base shear 54
1.18 Simplified lateral force procedures 55
1.19 Vertical distribution of seismic forces 60
1.20 Simplified vertical distribution of base shear 63
1.21 Vertical seismic load effects 64
1.21.1 Overturning 65
1.21.2 Foundation design 68
1.21.3 Optional vertical seismic load effect 69
1.22 Diaphragm loads 71

1.23 Story drift . . . 73
1.24 Simplified determination of drift . . . 78
1.25 *P*-delta effects . . . 79
1.26 Building separation . . . 82
1.27 Redundancy factor . . . 84
1.28 Load combinations . . . 95
1.28.1 Strength design loads and load factors . . . 95
1.28.2 Special seismic load combinations for the strength design method . . . 98
1.28.3 Allowable stress design method . . . 102
1.28.4 Special seismic load combinations for the allowable stress design method . . . 104
1.29 Structural elements . . . 105
1.29.1 Connections . . . 105
1.29.2 Lateral design force on walls . . . 107
1.29.3 Lateral design force on parapets . . . 109
1.30 Anchorage of structural walls . . . 111
1.30.1 Anchorage to flexible diaphragms . . . 112
1.30.2 Anchorage to rigid diaphragms . . . 114
1.30.3 Subdiaphragms and continuous ties . . . 118
1.31 Architectural, mechanical, and electrical components supported by structures . . . 120
1.31.1 Design force on mechanical and electrical components . . . 122
1.31.2 Design force on architectural components . . . 124
1.31.3 Wall cladding displacements . . . 125
1.31.4 Wall cladding seismic forces . . . 127
1.32 Rigidity and torsion . . . 130
1.32.1 Shear wall stiffness . . . 131
1.32.2 Rigid diaphragm . . . 133
1.33 Modal analysis procedure . . . 140
1.33.1 Horizontal structural irregularities . . . 141
1.33.2 Vertical structural irregularities . . . 146
1.33.3 Selection of lateral force procedure . . . 150
1.33.4 Modal shapes . . . 152
1.33.5 Modal participation factor . . . 155
1.33.6 Modal base shear . . . 158
1.33.7 Scaling factors . . . 161
1.33.8 Vertical distribution of modal forces . . . 164
References . . . 166

2 DESIGN FOR WIND LOADS . . . 169

2.1 Wind effects . . . 170
2.2 Analysis procedures . . . 172
2.3 General requirements . . . 173
2.3.1 Exposure category . . . 173
2.3.2 Basic wind speed . . . 175
2.3.3 Velocity pressure exposure coefficients for the whole building . . . 178
2.3.4 Topographic effects . . . 178
2.3.5 Directionality factor . . . 180
2.3.6 Building types . . . 180
2.3.7 Gust effect factor . . . 182
2.3.8 Enclosure classifications . . . 182
2.3.9 Ground elevation factor . . . 184
2.4 Analytical directional design method for MWFRS . . . 184
2.4.1 Minimum design wind loads . . . 185
2.4.2 Design wind load cases . . . 186
2.4.3 Wind velocity pressure . . . 188
2.4.4 Internal pressure coefficients and internal pressure . . . 192
2.4.5 External pressure coefficients and external pressures . . . 193

2.5 Simplified directional design method for MWFRS . . . 201
2.5.1 Wall pressure . . . 202
2.5.2 Roof pressure . . . 204
2.6 Analytical envelope design method for MWFRS . . . 208
2.6.1 Design parameters . . . 209
2.6.2 Wind velocity pressure . . . 209
2.6.3 Internal pressure coefficients and internal pressure . . . 210
2.6.4 External pressure coefficients and external pressure . . . 210
2.6.5 Design wind load cases . . . 212
2.7 Simplified envelope design procedure for MWFRS . . . 215
2.7.1 Design procedure . . . 215
2.7.2 Adjustment of net pressures . . . 216
2.7.3 Simplified method applied to the MWFRS . . . 217
2.8 Components and cladding . . . 221
2.8.1 Determination of components and cladding loads . . . 221
2.9 Analytical envelope design method for components and cladding . . . 223
2.9.1 Design parameters . . . 224
2.9.2 Velocity pressure exposure coefficients and velocity pressure . . . 224
2.9.3 Internal pressure coefficients and internal pressure . . . 225
2.9.4 External pressure coefficients and external pressure . . . 227
2.10 Simplified envelope design method for components and cladding . . . 231
2.10.1 Design parameters . . . 232
2.10.2 Adjustment of net pressures . . . 232
2.10.3 Net wind pressure . . . 233
2.11 Analytical directional design method for components and cladding . . . 236
2.11.1 Design parameters . . . 237
2.11.2 Velocity pressure exposure coefficients and velocity pressure . . . 237
2.11.3 Internal pressure coefficients and internal pressure . . . 238
2.11.4 External pressure coefficients and external pressure . . . 239
2.12 Simplified directional design method for components and cladding . . . 241
2.12.1 Design parameters . . . 241
2.12.2 Adjustment of net pressures . . . 242
2.12.3 Net wind pressure . . . 242
References . . . 247

3 SEISMIC DESIGN OF STEEL STRUCTURES . . . 249

3.1 General design requirements . . . 252
3.2 Material strength and ductility . . . 253
3.3 Capacity design and expected material strength . . . 255
3.4 Demand critical welds . . . 256
3.5 Protected zones . . . 257
3.6 Loads and load combinations . . . 258
3.7 Concentrically braced frames . . . 259
3.8 Ordinary concentrically braced frames . . . 260
3.8.1 Diagonal braces . . . 261
3.8.2 Beams in chevron configuration . . . 262
3.8.3 Columns . . . 264
3.8.4 Diagonal brace connections . . . 264
3.9 Special concentrically braced frames . . . 269
3.9.1 Capacity design basis . . . 270
3.9.2 Diagonal braces . . . 271
3.9.3 Diagonal brace connections . . . 275
3.9.4 Beams in chevron configuration . . . 286
3.9.5 Columns . . . 293
3.10 Eccentrically braced frames . . . 298
3.10.1 Basic requirements . . . 299

3.10.2 Link requirements . . . 299
3.10.3 Link shear strength . . . 300
3.10.4 Link length . . . 302
3.10.5 Link rotation . . . 302
3.10.6 Link stiffeners for I-shaped cross sections . . . 304
3.10.7 Beam requirements . . . 314
3.10.8 Diagonal brace requirements . . . 320
3.10.9 Column requirements . . . 323
3.11 Special moment frames . . . 327
3.11.1 Beam-to-column connections . . . 327
3.11.2 Design principles . . . 331
3.11.3 Strong column-weak beam concept . . . 334
3.11.4 Beam details . . . 340
3.11.5 Column details . . . 341
3.11.6 Panel zone design . . . 343
3.11.7 Continuity plates . . . 345
3.12 Buckling-restrained braced frames . . . 351
3.12.1 Buckling-restrained brace applications . . . 353
3.12.2 Brace requirements . . . 354
3.12.3 Brace connection requirements . . . 360
3.12.4 Beam design requirements . . . 361
3.12.5 Column design requirements . . . 363
3.13 Steel special plate shear walls . . . 365
3.13.1 Web requirements . . . 366
3.13.2 Strip model methodology . . . 369
References . . . 370

4 SEISMIC DESIGN OF CONCRETE STRUCTURES . . . 373

4.1 Special moment frames . . . 378
4.1.1 Design loads . . . 379
4.1.2 Beam details . . . 381
4.1.3 Beam design . . . 384
4.1.4 Column details . . . 397
4.1.5 Column design . . . 401
4.1.6 Joint design and details . . . 414
4.2 Special structural walls . . . 418
4.2.1 Shear capacity of shear walls . . . 419
4.2.2 Special boundary elements . . . 420
4.2.3 Nonspecial boundary elements . . . 424
4.3 Slender wall design . . . 433
4.3.1 General requirements . . . 434
4.3.2 Required strength . . . 435
4.3.3 Service load deflections . . . 437
4.4 Anchorage in concrete . . . 445
4.4.1 Design requirements for tensile loading . . . 448
4.4.2 Design requirements for shear loading . . . 452
4.4.3 Interaction of tensile and shear forces . . . 455
References . . . 459

5 SEISMIC DESIGN OF WOOD STRUCTURES . . . 461

5.1 General provisions . . . 462
5.1.1 Building classification . . . 462
5.1.2 Design methodology . . . 462
5.2 Lateral-force-resisting system . . . 463
5.2.1 Lateral load path . . . 463
5.2.2 Connection details . . . 464

5.3 Diaphragms . . . 466
5.3.1 General requirements . . . 466
5.3.2 Diaphragm strength . . . 467
5.3.3 Diaphragm deflection . . . 477
5.3.4 Diaphragm flexibility . . . 480
5.3.5 Subdiaphragm requirements . . . 484
5.3.6 Design of collectors . . . 487
5.4 Shear walls . . . 492
5.4.1 General requirements . . . 492
5.4.2 Shear wall strength . . . 499
5.4.3 Shear wall deflection . . . 508
5.4.4 Design using the segmented shear wall method . . . 512
5.4.5 Design using the perforated shear wall method . . . 517
5.4.6 Design using the force transfer round openings method . . . 524
5.5 Wood structural panels to resist combined shear and uplift from wind . . . 529
5.5.1 Design requirements . . . 529
References . . . 532

6 SEISMIC DESIGN OF MASONRY STRUCTURES . . . 535

6.1 Reinforced masonry shear walls . . . 538
6.1.1 Reinforcement requirements . . . 540
6.1.2 Design loads . . . 541
6.1.3 Strength reduction factors . . . 542
6.1.4 Shear capacity of a shear wall . . . 543
6.1.5 Axial load capacity of a shear wall . . . 547
6.1.6 Flexural capacity of a shear wall . . . 550
6.1.7 Boundary elements . . . 563
6.1.8 Deflections . . . 565
6.1.9 Sliding shear and shear friction . . . 569
6.2 Walls with out-of-plane loading . . . 571
6.2.1 Strength reduction factors . . . 572
6.2.2 Shear capacity . . . 572
6.2.3 Flexural demand on a slender wall with one layer of centered reinforcement . . . 575
6.2.4 Flexural capacity of a slender wall with one layer of centered reinforcement . . . 578
6.2.5 Deflection under service loads . . . 586
6.3 Headed anchor bolts . . . 587
6.3.1 Headed anchor bolt installation . . . 587
6.3.2 Seismic design requirements . . . 589
6.3.3 Headed anchor bolts in tension . . . 589
6.3.4 Headed anchor bolts in shear . . . 592
References . . . 597

INDEX . . . 599
